Gentay expands globally and secures a major win with Oil Major

LONDON, 10 October 2011 - Gentay is pleased to announce the continuation of its global expansions into Asia with the establishment of its Singapore based office. This expansion coincides with a major contract to supply BP Shipping Limited with an array of vessel based surveillance CCTV cameras utilizing the revolutionary low cost iPoP – Network Solutions for Vessels.

Recognizing the continued growth that Asia offers, together with the proximity of some of the world's major Shipmanagement companies or their subsidiaries, Singapore offers a unique opportunity for Gentay to offer the unique low cost iPoP-Network Solutions for Vessels.

Since the launch of the iPoP-Network Solution for Vessels six months ago, this revolutionary equipment for creating or expanding computer networks onboard vessels using BPL (Broadband via Powerline) Technology has been successfully deployed on Bulk Carriers, Gas Carriers, Off Shore Supply Vessels, Car Carriers, Chemical Tankers and others.

Utilizing the iPoP-Network Solution for Vessels and integrating this technology with conventional internal and external CCTV cameras, Gentay has been awarded a contract by BP Shipping Limited to deploy the system onboard it's vessel to transmit CCTV signals into the vessel citadel for surveillance purposes during possible piracy attacks.

Speaking about this unique innovation, Mr. Martin Nygate, Director of Gentay said:

"Installation of CCTV cameras onboard vessels for monitoring and surveillance has been of interest to the maritime industry for a long time. Whilst the installation of CCTV cameras has become common place in land based industries, the expansion of CCTV cameras into the Maritime Industry has always proven to be prohibitively expensive due to the need to supply network equipment.

By combining the low cost iPoP-Network Solutions for Vessels with CCTV equipment, it is now very affordable to provide remote real time CCTV monitoring to the Master and office"

About Gentay

Gentay has been established since 2002 with the purpose of defining and supplying the global Maritime and Oil & Gas industries with products and services which are difficult to obtain or not readily available on the general market.

Gentay Ltd prides itself on its market research and development abilities to identify and meet the requirements of its targeted market.
